

Confectionery conveyor

Usage A device that is used in confectionery transporter which pushes trays with confectionery onto the conveyor.

Explanation

Conventionally, an air cylinder was used for this purpose, but due to its difficulty in adjusting the speed of extrusion, the confectionery may at times jumped out of the tray.

In addition to being able to use the air control (wiring and program) as it is, there were two other advantages.

- ① Confectionery stopped jumping out the tray.
- ② Changing the forwarding speed and returning speed has lead to a shorter cycle time.
