

# Glass Substrate Positioning Device

**Usage** Adjusting the guide width of the transfer device according to two types of glass substrate sizes.

## Explanation

A device that adjusts the width of the left/right guides according to the size of the glass substrate in order to regulate their transportation position on the glass substrate transportation line.

This was the customer's first time dealing with an electric motor, and they requested simplicity, low cost, and short delivery times, which led to the adoption of the Elecylinder.
